

**KARIBA
REDD+ FOREST
PROTECTION
ZIMBABWE**

**Saving forests, protecting wildlife,
and changing lives**

Since the world's largest REDD+ (Reduced Emissions from Deforestation and Degradation) project launched in 2011, more than 18 million tonnes of CO₂ have been prevented by June 2016. The project has also created a better way of life for local farmers and communities now and in the future.

785,000 hectares of forest and wildlife on the southern shores of Zimbabwe's Lake Kariba are now being protected.

Zimbabwe has been torn apart by war, civil unrest, economic collapse and population growth. Over the past twenty years desperate communities have delved deeper into the forests, clearing for farming and fuel for their rudimentary homes. More than a third of Zimbabwe's majestic forests are now gone. The project ensures that 785,000 hectares of forest and wildlife on the southern shores of Zimbabwe's Lake Kariba are now being protected.

Beyond saving the environment, a range of activities support the independence of local communities. Agricultural workshops, low-emission brick-making, establishing fast-growing fuel-wood plantations, and ecotourism provide employment and protect endemic wildlife including endangered Black Rhinos.

3 GOOD HEALTH AND WELL-BEING

30,000

number of people whose health has improved

4 QUALITY EDUCATION

1,533

number of people who profited from improved education

13 CLIMATE ACTION

1,730,800

tCO₂e mitigated in relevant year

15 LIFE ON LAND

784,987

hectares of land conserved
